

FDR Go iQ is officially here!

Fujifilm is fresh out of FDR Go PLUS after its end of sales was announced in late August. It's served customers well, but we're thrilled to now lead with the latest technology and convenience available in FDR Go iQ.

Combined with Fujifilm's renowned image quality and low-dose technology, the FDR Go iQ delivers X-ray room-quality images right at the bedside.

FDR Go iQ supports faster, smarter exams:

- Smart-touch tube head display for patient-side adjustments includes a simplified UI.
- 3D camera in the collimator supports alignment, SID, and tube angle guidance.
- In-bin detector charging for continuous charge on the go.

FDR Go iQ embodies Fujifilm's RSNA theme "Innovation inspired by experience"

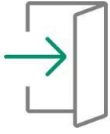

FDR Go iQ is the next in a well-loved line of portables. A new [video](#) on our RSNA preview website provides a tour of the new features.

Please contact your Fujifilm sales representative to set up a demo at RSNA.

Fujifilm appreciates your business and looks forward to providing imaging solutions to your organization. As always, please feel free to contact your sales support team with any questions or comments you may have.
